

**CABLES FOR
WHITE GOODS
INDUSTRY**

The components and types of wiring used for large appliances cover a broad spectrum. Among these we can identify wiring for boilers, air conditioners, Refrigerators, washing machines, dishwashers, etc. These specific cables will then be joined by more generic components, such as extensions and adapters that are also used in this sector.

Like many other wires and cables, those used in the white goods sector form part of devices that undergo heavy daily use, and therefore they must guarantee strong resistance and seal during operation and be approved and manufactured according to the relevant provisions. Furthermore, when it is necessary to replace worn or faulty wiring, it is good practice to contact professionals in the sector, so as not to cause further damage to the appliance that you intend to repair.
